01 · ORIGIN

From roadworks to owning the source.

Musaed Al-Johani Company was established in 1976 in Madinah. It worked in road construction and general contracting across Riyadh, Madinah, Hail and the southern region. Activities expanded into crushers and concrete factories, with the first crusher established in 1981 as one of Madinah's earliest.

1976

Founded in Madinah

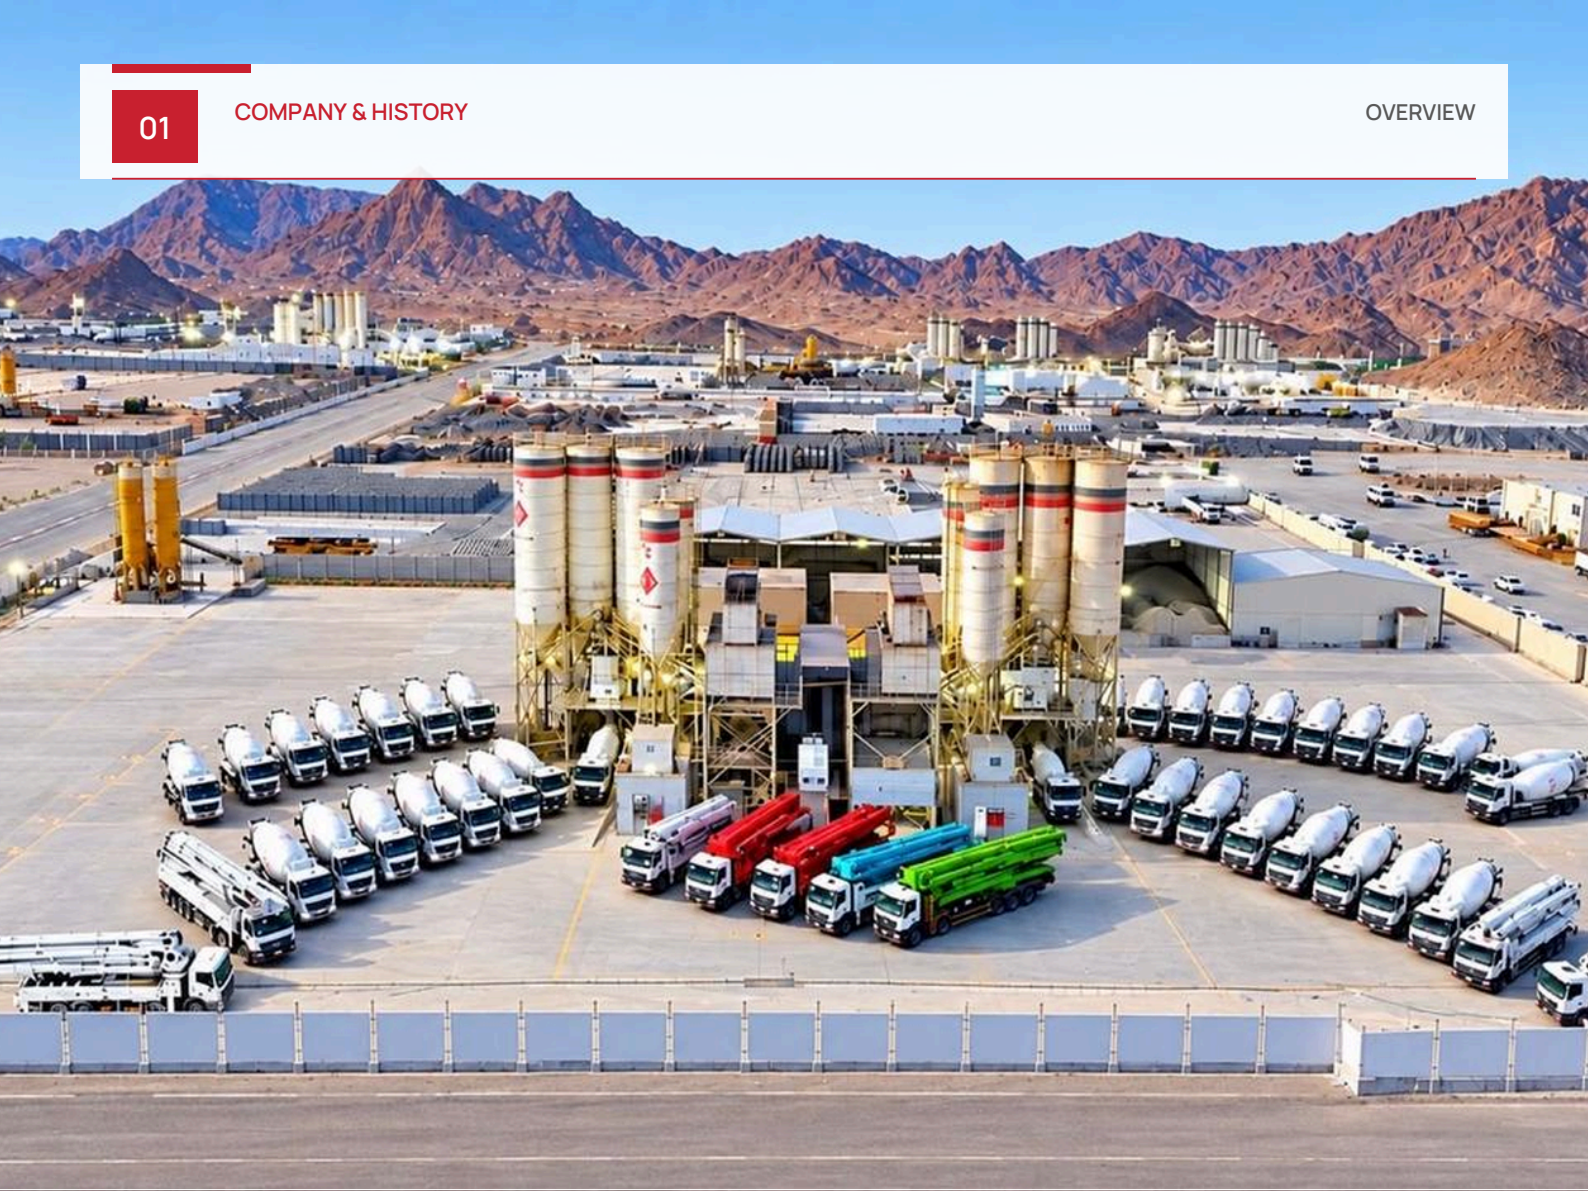

MORE THAN FIFTY YEARS

Experience accumulated. Capability expanded.

A deliberate evolution from execution into an integrated industrial system.

GROWTH MILESTONES

1976	01	Founded in Madinah
1981	02	First crusher established
6 SITES	03	Crusher locations across the Kingdom
4 ACTIVITIES	04	Connected operating activities

A RECORD OF CAPABILITY

More than 13 million cubic metres supplied.

The first ready-mix concrete factory was established in 1985. The supplied volume reflects deep field experience, while factory capabilities continue to advance in support of Saudi Vision 2030 and qualification for governmental and strategic projects.

1985

FIRST READY-MIX PLANT

DOCUMENTED SUPPLY

2030

CONTINUOUS CAPABILITY

02 · VALUES

The standard behind every decision.

Five principles shape the work from first commitment to final delivery.

01 Commitment

Full effort, with readiness to do more.

02 Empowerment

Authority and confidence to serve customers better.

03 Transparency

Clarity and mutual respect across every relationship.

04 Respect

A workplace founded on consideration for everyone.

05 Integrity

The foundation of a strong institution and lasting trust.

APPROVED POLICY

Quality is an operating responsibility.

Our goal is complete customer satisfaction and compliance with international, contractual and legal requirements.

CONTROL & IMPROVEMENT CYCLE

01

CONFORMITY BY DESIGN

Provide products that comply with international quality standards and all contractual and legal requirements.

02

MEASURED PERFORMANCE

Monitor performance through customer service, reports and surveys, supported by continuous employee training.

03

CONTINUOUS IMPROVEMENT

Review the quality-management system regularly to maintain effectiveness and identify improvements.

04

RECOGNISED REFERENCES

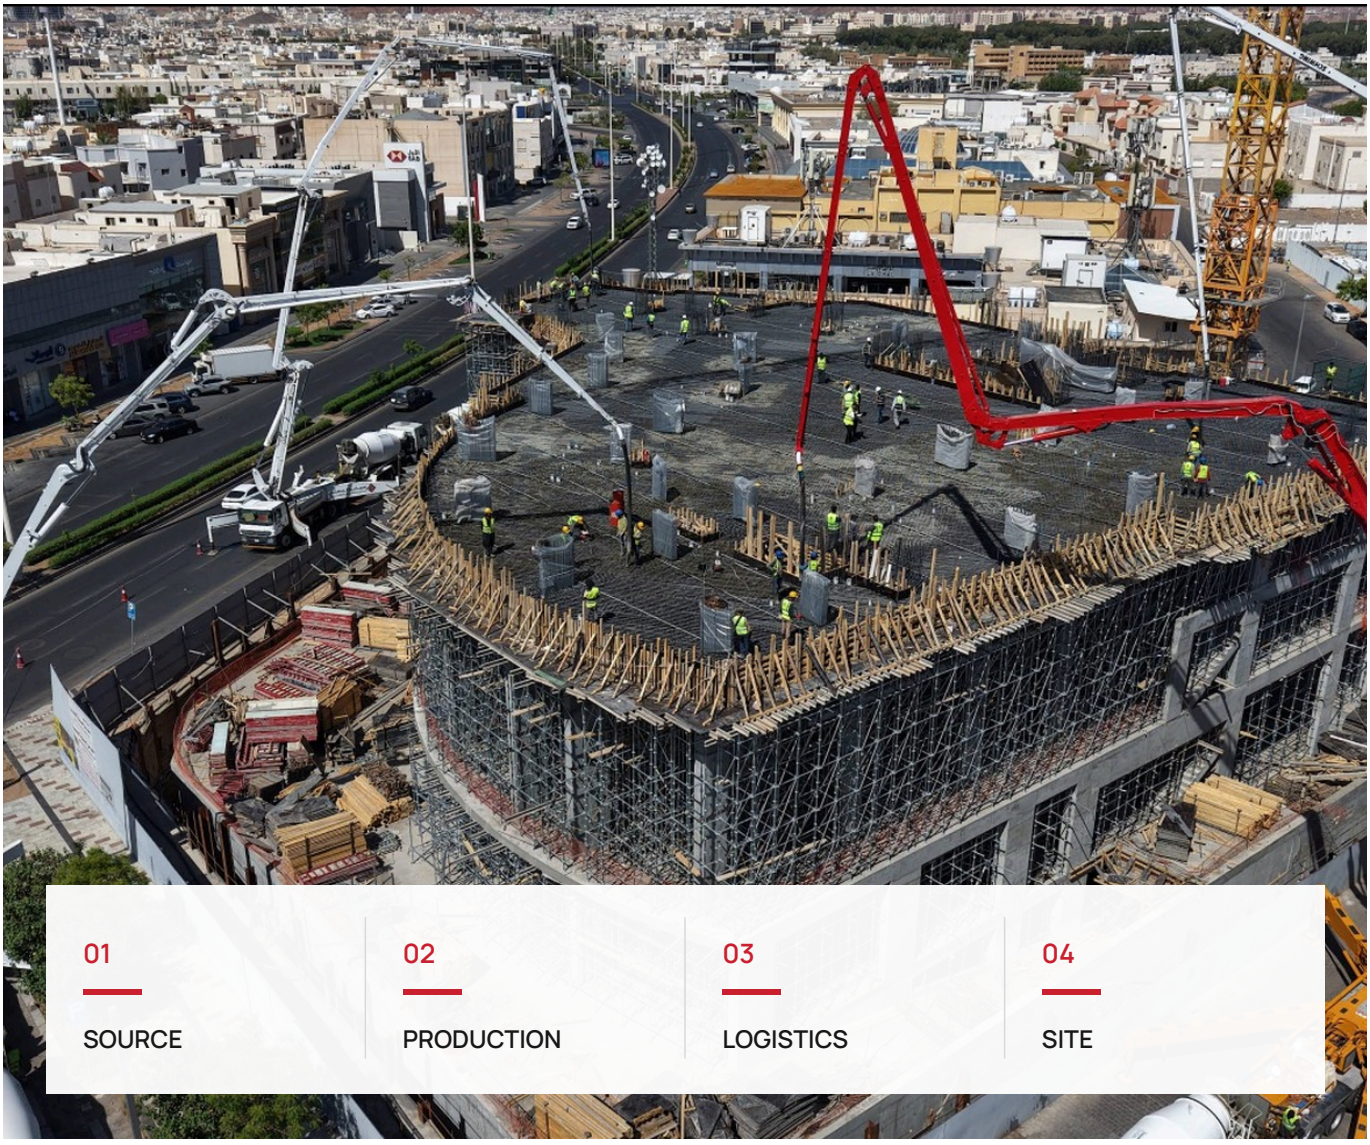

ISO 9001:2015 / SASO / NRMCA

01	02	03
CONFORMITY	TRAINING	IMPROVEMENT

03 · OPERATIONS

From source, to mix, to site.

Industrial capabilities operating as one measurable, traceable chain.

PRODUCTION

Capacity designed for major projects.

Five integrated central mixers deliver combined capacity of up to 500 cubic metres per hour, with the ability to establish batching plants inside major project sites.

5

CENTRAL MIXERS

500 m³/h

COMBINED CAPACITY

SOURCE CONTROL

Geological selection. Controlled storage.

Gravel is supplied from company-affiliated crushers selected by specialist geological engineers. Grain gradation and material hardness are considered, while clay contamination is excluded. Storage bins use water sprinklers to remove dust and reduce material temperature. The company laboratory also conducts periodic tests of raw materials to verify compliance with required specifications and standards.

01 GEOLOGICAL SELECTION

02 WASHING & DUST CONTROL

03 PERIODIC TESTING

COMMAND ALKON

Precision inside every cycle.

The system measures moisture and corrects sand and water. Concrete scales operate to ±1% accuracy, compensating weight variance in the following cycle.

600,000 L CHILLED WATER / DAY · 4 CHILLERS · BELOW 6°C

160,000 kg ICE PRODUCTION / DAY · 250,000 kg STORAGE

01 CHILLED-WATER STORAGE

02 ICE-PRODUCTION SYSTEM

COMMAND ALKON

Moisture calculation and loading correction.

The worked control examples stated in the technical profile.

DRY SAND	DESIGN WATER	MOISTURE	FREE WATER	WET SAND	CORRECTED WATER
1,000 kg	175 L	8%	80 L	1,080 kg	95 L

WEIGHT-VARIANCE COMPENSATION

CYCLE	TARGET	AFTER CORRECTION	ACTUAL LOAD	VARIANCE
1	7,500	7,500	7,550	+50
2	7,500	7,450	7,410	-40
3	7,500	7,540	7,565	+25

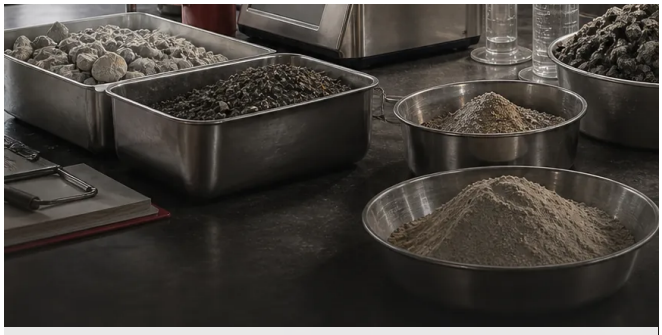

04 · VERIFICATION

Quality is not inspected at the end.

It is a record that begins before mixing and continues through site delivery.

01 Material selection

02 Mix design

03 Production & lab

04 Field verification

THREE CONTROL STAGES

Testing before, during and after production.

Modern equipped laboratories are operated by engineers, technicians and specialists inside and outside the factory.

CONTROL SEQUENCE

01

BEFORE POURING

Select the best materials and examine sand, water temperature and cement.

02

DURING PRODUCTION

Monitor temperature, develop the mix design for each pour or strength, and supervise placement.

03

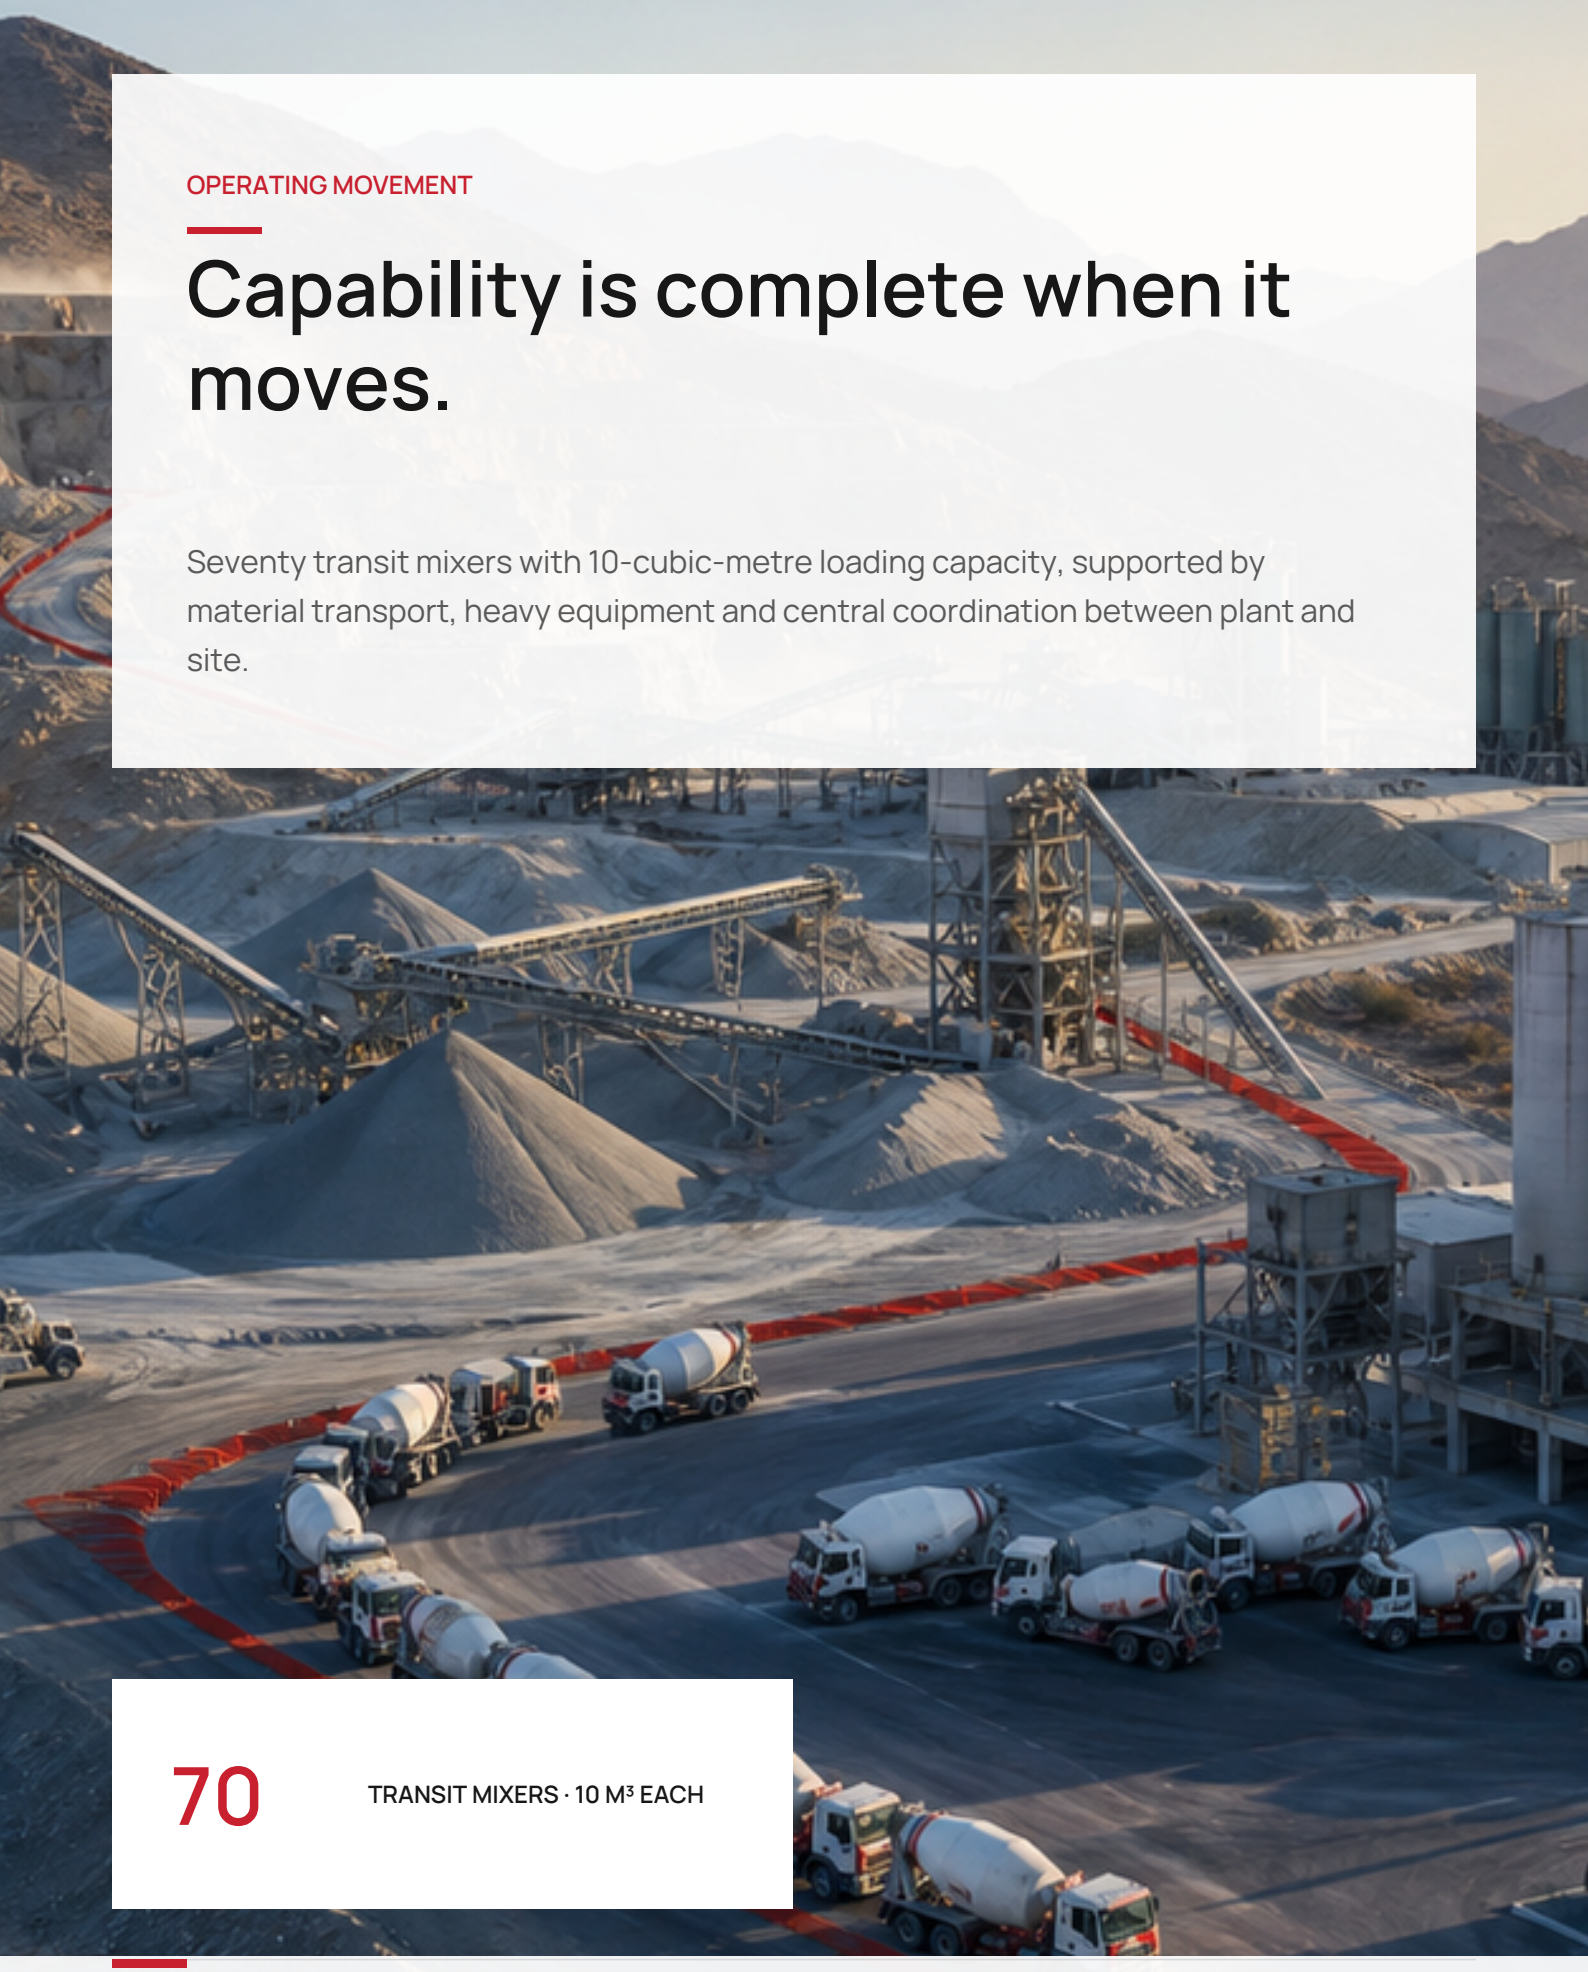

AFTER POURING

Verify engineering conformity, prepare test reports and cooperate with neutral central laboratories.

OPERATING MOVEMENT

Capability is complete when it moves.

Seventy transit mixers with 10-cubic-metre loading capacity, supported by material transport, heavy equipment and central coordination between plant and site.

70 TRANSIT MIXERS · 10 M³ EACH

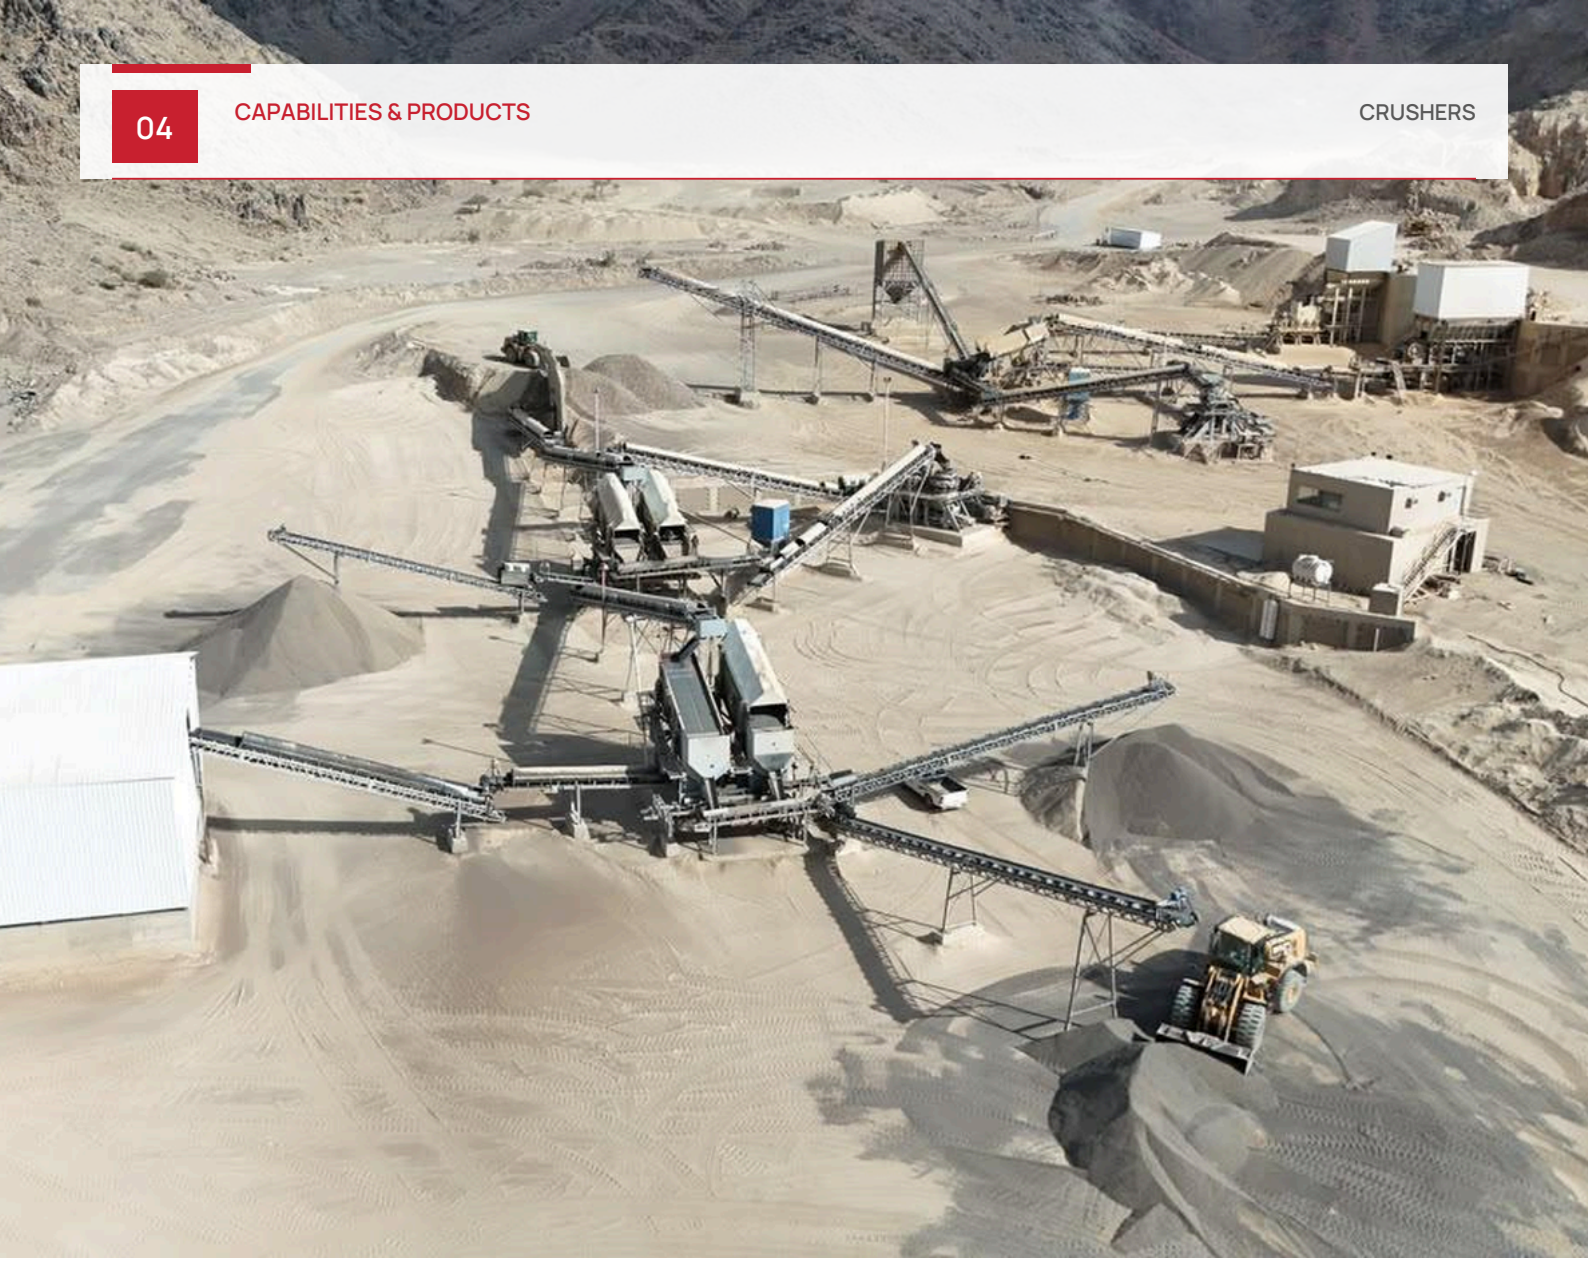

15 CONCRETE PUMPS

CONTROL THE SOURCE

The material starts clean.

Five crushers across different regions of the Kingdom produce multiple aggregate gradations at an equivalent rate of 400-500 cubic metres per hour. Two sand-washing systems remove impurities and clay. Aggregate represents approximately 70-75% of cement-mix components.

5	400-500 m³/h	70-75%

Ref: S13026/MHE/035

Date: 08/08/2013 G 28/09/1434 H

M/s Saudi Sinladin Group

Attn: Mr. Ahmed Abdul Haleem

Project: Madinah Haram Expansion

Subject: Concrete Mix Design C35(AL-JOHANI)

Reference is made to the letter of QA/QC Manager Ref. MAD/QC/2013/013 dated 01/08/2013 regarding the captioned subject.

We hereby approve the use of C35 concrete mix design by (AL-JOHANI Ready Concrete Factories) to cast such vacant piles under the following conditions:

1. Unless otherwise noted hereunder, the concrete should be supplied in accordance with Project Specifications 03300 for Cast-in-Place Concrete and 03306 for Mass Concrete, with particular attention to satisfying the requirements of Maximum Placement Temperature (peak concrete temperature and maximum temperature differential).
2. Slump measurements on site should satisfy the accepted range of 180 ~ 240 mm.
3. The Contractor should submit a cement test certification from the Manufacturer for each new delivery of cement confirming that the cement complies with the specification requirements not later than the day of delivery of the cement.
4. The Contractor should reconduct the tests on fresh density, bleeding, and setting time in presence of DAR Engineer.
5. The Contractor should conduct new tests on potential alkali reactivity of coarse and fine aggregates in coordination with DAR Engineer.
6. The Contractor should submit test reports for all new batches of the concrete constituents and when changing the sources of these constituents, including aggregates and admixtures.
7. The Contractor should perform all tests required on concrete according to Field Quality Control provisions, including the specified Absorption Tests and Chloride Permeability Tests as per the Project Specifications.
8. The Contractor and concrete Supplier should adjust the mix design -if required for any reason- under the direction and approval of the Engineer.
9. Saudi Lab is only approved to conduct fresh concrete testing (temperature and slump) and hardened concrete compressive strength testing under direct supervision of DAR Engineer for current open works of Saudi Bin Laden Gro.

SBG should also provide a time schedule of intended vacant pile construction.

السلام عليكم ورحمة الله وبركاته

إشارة إلى مشروع إنشاء مباني المرحلة الثانية بالمكننة التقنية بالمدينة المنورة
مقاولتكم وإشارة إلى خطابكم رقم outside 188 وتاريخ ١٤٣٣/١٢/٢٥ هـ بخصوص طلب
إعتماد الطوب الخرساني بالمشروع وعليه نفيدكم بالآتي :

لامانع من إعتماد المصانع التالية لتوريد الطوب الخرساني بالمشروع :-
١- مصانع مساعد الجهني (مورد اول) .
٢- مصانع شبة الجزيرة للخرسانة (مورد ثان) .

مع الالتزام بالآتي :-
١- المواصفات العامة للمشروع و جداول الكميات .
٢- تقديم مكتب متخصص بأختبارات البلوك للإعتماد من قبلنا قبل البدء بالتنفيذ .
٣- مراعاة الأصول الفنية أثناء التنفيذ .

و الله يحفظكم

SUB : MIX DESIGN AND MATERIAL TEST BY MUNAAD AL JUHANY
BATCHING PLANT

Dear Sir ,

Up on your request Saudi Labs Ltd. has checked and reviewed the Mix Design and material test reports submitted by Munaad Al Juhany Batch Plant for different mixes for the above mentioned project .
The Mix proportions and the Mix design computations submitted for different mixes based on absolute volume (ACI 211) are correct and satisfactory. The material test reports also meet the required specification based on ASTM standards.
We are herewith submitting all the reports from Munaad Al Juhany Batch Plant along with this letter.

With best regards .
